As Singapore continues to chart towards a Smart Nation, we will require industries to steadfastly acquire new capabilities and transform through digitization.

With Industry 4.0, what are the new behaviour across industries and how will the emerging of new technologies affect the logistics industry?

This year, CDAS presents the Container, Logistics & Transport Business Forum 2017 on *Strengthening the Industry Transportation Ecosystem* to tackle the changing business landscape of logistics.

The Industry 4.0 has revolutionised the way we live and work, brought about by the advent of disruptive trends and technologies. Industry players are working together to build a collaborative ecosystem with automated processes to allow information sharing and seamless communication.

The aim is to improve end-to-end supply chain visibility, drive greater efficiency and reduce costs for all.

Join us at the forum as we explore how our logistics industry can come together to create a vibrant ecosystem, and achieve mutual benefits, and staying relevant in a changing industry.

Who should attend?

CEOs, Business Directors, Management involved in business development and technology procurement for the company are highly recommended to attend this forum.

Join us as we explore these topics together

- ◆ Digitization in the Logistics Industry
- ◆ The Changing Landscape of the Land Transportation Sector
- ◆ The Internet of Things (IoT) in Logistics
- ◆ The Value of Robotic Process Automation (RPA)
- ◆ The Workforce Skills and its Importance for the Future Economic Landscape
- ◆ Building a Collaborative Ecosystem to Support the Transformation of Logistics Industry
- ◆ Focus Group Discussion (Refer to the Forum Topics for more details!)
